

Survival Mechanism of Flood Affected People: A Study of Two Villages of Dhunat Upazila under Bogra District
(Published in June, 1992)

a) Researchers' Identity

1. A.H.M. Nizamuddin Chowdhury, Deputy Director
M.Sc. (Geography), Dhaka University
2. Md. Abdul Khaleque, Deputy Director
B.Sc. (Statistics), Rajshahi University
M.A. (Applied Population Research), University of Exeter, U.K
3. Nasimul Ghani , Joint Director
M.S.S. (Economics), Dhaka University
4. A.K.M. Khairul Alam, Deputy Director
B.A. (Hons), Rajshahi University,
M.S.W (Social Work), Bandung School Social Welfare Indonesia

b) Objectives

The major objectives of this phase of the study can be stated as follows:

- i. To find out the extent of post flood plantation and cultivation by the flood affected people;
- ii. To measure the reconstruction/recouping of flood, loss of different items of the households, poultry and livestock;
- iii. To find out the nature and treatment of diseases after the flood;
- iv. To obtain information and flood intake of the flood affected people; and
- v. To make recommendations.

c) Abstract

Flood is an annual phenomenon in this unfortunate land. This is an attempt to find the survival mechanism of our flood affected brethren who has only highlighted the inadequacy of our institutional mechanisms to fight such a calamity. Our labour will be deemed to have been amply rewarded if the foregoing pages can be helpful for the policy makers in taking appropriate measures to help the flood affected people.
